

Agrichar - A solution to global warming?

ABC CATALYST, August 2007

Bio-geochemists studying Terra Preta are getting together with Australian engineers making biofuels. The result is "Agrichar" technology. It uses the charcoal by-product to bury carbon in topsoil where it's needed for agriculture.

The results promise green energy, soil restoration and greenhouse mitigation from an affordable technology that can remove more CO₂ from the atmosphere than is released.....
